After reviewing the effort required to develop a Clear Zone Table for individual projects and evaluating its usefulness, I have determined that providing a Clear Zone Table in the plans has minimal benefit. Therefore, Clear Zone Tables will no longer be included in the plans.

Designers should note that projects still need to be designed to provide the required clear zones wherever practical. Design exceptions are still required when the provision of an adequate clear zone cannot be achieved.

If you would like additional information call me at 444-6244.
